ALDRIDGE ELECTRIC ROLLS OUT EDUCATIONAL WEBSITE

LIBERTYVILLE, IL. – (March 19, 2010) – Aldridge Electric is pleased to introduce a unique educational website, **Prairie Wind** www.prairie-wind.org. Aldridge Electric developed this website as a tool to educate students in grade school, high school, and college by providing resources on the economic and ecological benefits of clean energy. The website includes a bountiful compilation of green resources including books and online links.

Prairie Wind is an international website where students can find an abundance of research materials including access to the American Wind Energy Association and the European Wind Energy Association. Grade school children can download a coloring book about wind turbines on the grade school page, a book which they are welcome to print and color. Teachers can quickly find sufficient information to develop teaching materials for a day or for a full week. They can access ReCharge, the daily online magazine that reports on clean energy projects around the world.

For more information, students and teachers are invited to write to Dr. John Slade, a teacher with 25 years of experience in the classroom. Dr. Slade has authored several books on climate change and clean energy. He will be glad to respond to your email inquiries as you explore one of the most exciting challenges of our time.

Aldridge Electric is committed to incorporating environmentally friendly business practices into our daily operations and invites you to visit the website, www.prairie-wind.org.
